

PHP CB THANKYOU/DOWNLOAD PROTECTION SCRIPT FROM SOFTWAREBYBRIAN.COM

Copyright 2006 by Brian Vogt. All rights reserved.

Instructions for use:

1. Setup your Secret Key in clickbank.

quest.		\$0.00	URL & Price of item 4
		\$0.00	URL & Price of item 5
		\$0.00	URL & Price of item 6

Advanced Settings:

Cgi [purchase validation](#) (for experienced programmers only):
 Secret key (up to 16 letters & digits)

Your Secret Key (you should choose something more secure than this)

2. Set the settings in the "thankyou.php" file.

```
//===== JUST SET THE FOLLOWING=====
$secretkey = "ABCDEFGG"; // secret key from clickbank
$redirecturl = "http://www.google.com"; // url to send invalid page

$usesessions = true; //highly recommended to leave this
//(Note: $usesessions must be set in dl.php too!)

//THE ARRAY OF FILES THAT WILL GET URLS MADE FOR THEM
//MAKE SURE YOU CHMOD FILE(S) TO 700 !!!!!!!!!!!!!!!
$files[0] = "test.pdf"; //link will be stored in $url[0]
```

\$secretkey = "YOURSECRETKEY" ... Your secret key goes INSIDE the double quotes.

\$redirecturl = "http://yousite.com" ... Put whatever site in here you want to send invalid requests to. If someone tried to send a link to your product delivery page (thank you page) to a friend, their friend will be sent to this url. You could, for example, just send them to your sales page.

\$files[0] = "yourfile.pdf" ... place the name of your file (don't worry about the path right now) in quotes here.

you can add more files by adding more elements ... like
\$files[1]
\$files[2] and these will be stored in \$url[0], \$url[1], \$url[2]

3. Paste the HTML CODE from your HTML THANK YOU / PRODUCT DELIVERY PAGE into the specified place in the thankyou.php file.

```
<!-- =====  
<!-- ===== PASTE YOUR HTML THANK YOU PAGE BELOW HERE =====  
  
    <!--html web page text goes HERE!  PHP variables for secure download link(s  
        $url[0], $url[1], $url[2] etc, according to how many of the $files[0] s  
  
        <a href=<? echo "\"$url[0]\""; ?>>Sample Link</a>  
  
<!-- ===== PASTE YOUR HTML THANK YOU PAGE ABOVE HERE =====  
<!-- =====
```

4. EDIT THE DOWNLOAD LINKS TO YOUR PRODUCT DELIVERY PAGE to use the \$url[] variables from the php script.

```
<!--html web page text goes HERE!  PHP variables for sec  
    $url[0], $url[1], $url[2] etc, according to how many  
  
    <a href=<? echo "\"$url[0]\""; ?>>Sample Link</a>
```

5. Set the settings in the "dl.php" file.

```
$redirecturl = ""; // redirurl  
$download_path = ""; //the relative path to where the  
$usesessions = true;
```

\$redirecturl = "http://yoursite.com" ... where to send invalid attempts to access the download link. If someone tries to send the link to a friend, or tries to access it again later, they'll be sent to this address.

\$download_path = "" ... the path to where your files are. for example, if you thankyou.php and dl.php files are in the root folder of your website and all your download files are stored in a "files" directory, your download_path might be

```
$download_path = "files/";
```

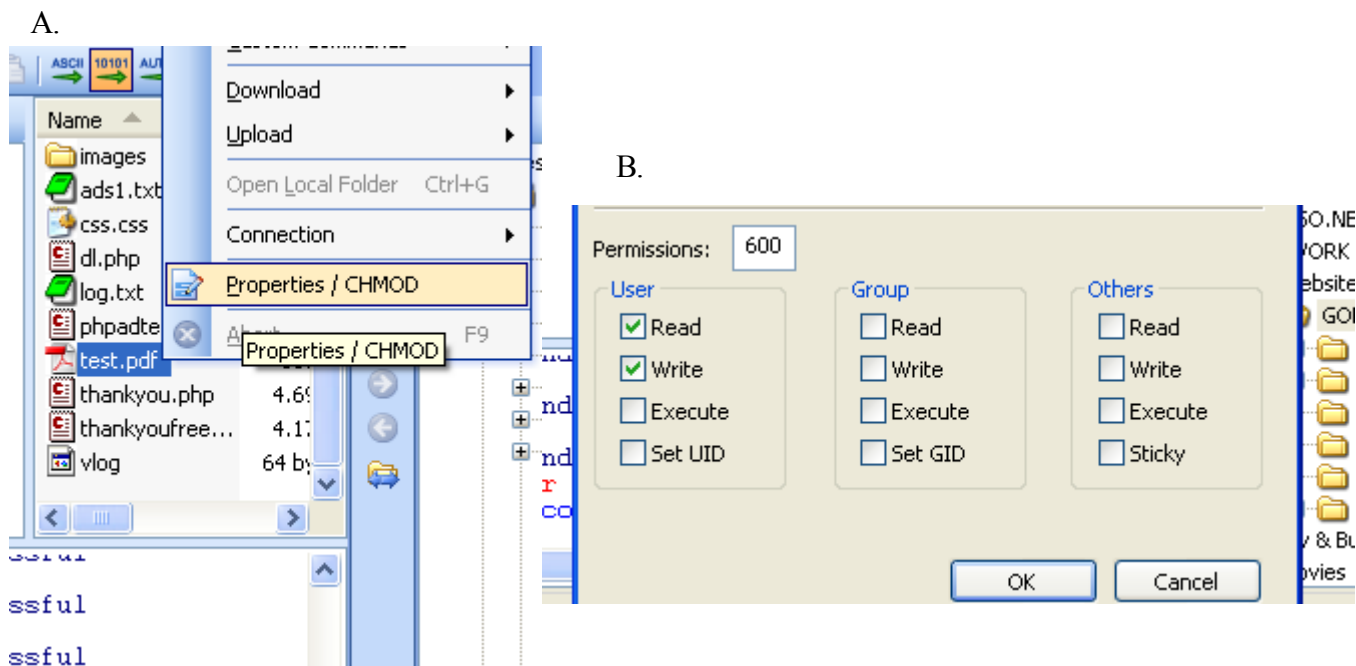

if your files are in the same place as your dl.php file, the path should be

```
$download_path = "";
```

NOTE: Setting the above setting incorrectly can cause the script not to work. If you encounter errors about file not being found or the download part of the script isn't working, check this setting and try changing it to see if it fixes the problem.

6. Upload the files to the place on your web server (including your download files) where you want them stored.

7. CHMOD the files that you want to protect to "600"

8. Set your clickbank settings to point to your thank you page... (if you uploaded your thank you page to the root directory of your web site, you'll use "http://yoursite.com/thankyou.php")

Your product delivery pages:

	\$0.00	URL & Price of item 1
	\$0.00	URL & Price of item 2
	\$0.00	URL & Price of item 3
	\$0.00	URL & Price of item 4

Put the url to your delivery/thank you page here.

9. TEST IT!!!! Test it to make sure it validates okay and that there aren't any problems. If you encounter problems, check your settings and try again. To successfully test it, you'll need to go through clickbank's fake/test signup process with a link that is set to 0.00.
